Please insert the Abstract of the Disclosure which is on the attached sheet.

## **ABSTRACT OF THE DISCLOSURE**

A display device of an electronic apparatus according to the present invention is a display device of an electronic apparatus for setting a plurality of conditions for a process of the electronic apparatus through an input portion 57 while displaying the conditions before the electronic apparatus performs the process in accordance with the conditions. The device comprises a determination portion 58 of determining whether or not each of the conditions has not yet been set, and a liquid crystal display panel 41 of displaying notifying information indicating to what degree conditions remain to be set. The liquid crystal display panel 41 displays buttons for setting the respective conditions on a screen thereof, and displays button(s) which have already been pressed as being unfilled and the number of buttons which have not yet been pressed. Therefore, by viewing the screen, the number and types of conditions which have not yet set can be known.
